

14)

الف) $\tan \frac{\pi}{4} + \sin \frac{\pi}{4} \cos \frac{\pi}{4} \Rightarrow -1 + \left(\frac{-\sqrt{2}}{2} \times \frac{\sqrt{2}}{2} \right) \Rightarrow \frac{9}{4} - \frac{1}{4}$

ب) $\tan \frac{\pi}{4} \sin \frac{\pi}{4} + \cos \frac{\pi}{4} \Rightarrow \left(\frac{-\sqrt{2}}{2} \times \frac{\sqrt{2}}{2} \right) + \left(\frac{1}{2} \right) \Rightarrow 0$

15)

$\cot = r \Rightarrow \frac{\cos}{\sin} = r \Rightarrow r \sin = \cos$

$\frac{12 \sin x - \sin x}{12 \sin x + \sin x} \Rightarrow \frac{11 \sin x}{13 \sin x} = \frac{11}{13}$

16)

$\sin = r \cos$

$\sin^2 + \cos^2 = 1$

معظم $\begin{cases} \cos = r \\ \sin = - \end{cases}$

$(r \cos)^2 + \cos^2 = 1$

$r^2 \cos^2 + \cos^2 = 1 \Rightarrow \omega \cos^2 = 1$

$\cos^2 = \frac{1}{\omega}$

$\cos = \frac{1}{\sqrt{\omega}} \Rightarrow \frac{\sqrt{\omega}}{\omega}$

17)

$\cos(A+B) = \cos A \cos B - \sin A \sin B$

$\cos \frac{11\pi}{4} \Rightarrow \cos \frac{\pi}{4}$

$\cos\left(\frac{\pi}{4} + \alpha\right) = \left(\frac{-\sqrt{2}}{2}\right)\left(\frac{-\sqrt{2}}{10}\right) - \left(\frac{\sqrt{2}}{2}\right)\left(\frac{\sqrt{2}}{10}\right) = \frac{2}{10} - \frac{2}{10} = 0$

الف)

$\sin \frac{\pi}{4} \Rightarrow \sin \alpha \cos B + \sin B \cos \alpha$

$\sin \frac{\pi}{4} = \sin \frac{\pi}{4}$

$\sin\left(\frac{\pi}{4} + \alpha\right) = \left(\frac{-\sqrt{2}}{2}\right)\left(\frac{\sqrt{2}}{10}\right) + \left(\frac{1}{\sqrt{2}}\right)\left(\frac{-\sqrt{2}}{2}\right) = \frac{-2}{10} - \frac{1}{10} = \frac{-3}{10}$

ب)

18)

$r \sin^2 + \cos^2 = \frac{r}{r} \Rightarrow \sin^2 + \cos^2 = \frac{r}{r} - \sin^2 \rightarrow 1 = \frac{r}{r} - \sin^2 \Rightarrow \sin^2 = \frac{1}{r}$
 $\sin = \frac{1}{\sqrt{r}} \Rightarrow \frac{\sqrt{r}}{r}$

$\tan^2 = \left(\frac{\sin^2}{\cos^2} \right) \Rightarrow \frac{1}{r} = \frac{1}{r}$

$\sin = \frac{1}{\sqrt{r}}$
 $\cos = \frac{\sqrt{r-1}}{\sqrt{r}}$

9)

$$\frac{1}{r} \times 4 \times \sqrt{r} \times \sin \alpha = \frac{1}{\omega}$$

$$4\sqrt{r} \times \sin \alpha = \frac{1}{\omega} \rightarrow$$

$$\frac{4\sqrt{r}}{\frac{1}{\omega}} = \sin \alpha \rightarrow$$

$$\frac{4\sqrt{r}}{\frac{1}{\omega}} = \frac{\sqrt{r}}{r} \rightarrow$$

$$\frac{4\sqrt{r}}{\frac{1}{\omega}} = r$$

10)

$$r \times r \times \frac{\sin 120^\circ}{r} = \omega \rightarrow$$

$$1 \cdot 1 = 4r^2 \rightarrow r^2 = \frac{1}{4} \rightarrow r = \frac{1}{2}$$

$$(r \times r) + (r \times r) = 1 \times 1 + 1 \times 1 = 2$$

11)

$$ABC = \omega \times v \times \frac{\sin A}{r} = \frac{1}{\omega} \sin A \rightarrow 1 \times \omega \sin A$$

$$1 \times \omega - 1 \times \omega = 1 \times \omega$$

$$ADE = r \times v \times \frac{\sin A}{r} = \frac{1}{\omega} \sin A$$

$$1 \times \omega \times \frac{1}{r} = 1 \times \omega$$

$$\sin A = \frac{r}{1} = r$$

$$\tan A = \frac{1}{r} = \frac{\sqrt{3}}{1}$$

12)

$$\frac{BN}{BC} = \frac{r}{\omega}$$

$$CN + NB = BC$$

مساحت‌ها با اضلاع بستگی دارد چون ارتفاع‌ها برابر است
پس نسبت مساحت‌ها برابر است نسبت به اضلاع

$$\frac{BM}{ABC} = \frac{BM}{AB} \times \frac{BN}{BC} = \frac{r}{\omega} = \frac{1}{r}$$

$$\frac{BM}{AB} = \frac{\omega}{r} \Rightarrow BM = \frac{\omega}{r}$$

$$AM = 1 - BM = \frac{r}{\omega}$$

$$\frac{BM}{AM} = \frac{\omega}{r} = \frac{\omega}{r}$$

13)

$$\frac{|\sin \alpha|}{\cos \alpha} = -\frac{1}{\cos \alpha} \rightarrow$$

$$\frac{|\sin \alpha|}{\cos \alpha} = \frac{-\sin \alpha}{\cos \alpha} \rightarrow$$

$$|\sin \alpha| = -\sin \alpha$$

$$\sin \alpha < 0$$

$$\frac{1}{\sqrt{\cos^2 \alpha}} - \tan \alpha = \frac{1 + \sin \alpha}{\cos \alpha} = \frac{1}{\cos \alpha} - \frac{\sin \alpha}{\cos \alpha} = \frac{1 + \sin \alpha}{\cos \alpha} \rightarrow 1 - \sin \alpha$$

پس در اینجا هم قرار دارد. $\cos \alpha > 0$ (نسبت به $1 - \sin \alpha$) پس $1 + \sin \alpha$ نسبت به $1 - \sin \alpha$
