

$$30 - \frac{54 \times 17}{x} = 3$$

$$\frac{(3 \times 30)}{9} + 3 + \frac{(4 \times 4)}{24} = 117$$

(الف)

۱

$$\frac{(3 \times 30)}{9} - (54 \times 514) = 207$$

(ب)

$$12 + 40 + 9 = 11$$

$\begin{matrix} \swarrow & \downarrow & \searrow \\ 2 \times 4 & 2 \times 3 & \frac{11}{2} \end{matrix}$

(الف)

۲

$$\frac{(4 \times 30)}{18} - (514 \times 11) = 11$$

(ب)

$$S \cdot AB = \frac{a}{r} R^2 \Rightarrow \frac{\pi}{4} \times \frac{r}{f} = \frac{r \pi}{f}$$

(الف)

۳

$$AB = a R = \frac{\pi}{4} \times 1 \times \frac{r}{f} = \frac{\pi}{f}$$

(ب)

$$\frac{1}{f} \times a \times a B \times \sin \gamma = \frac{1}{f} \times a \times \frac{r}{f} \times \frac{\sqrt{3}}{f} = \frac{r \cdot \sqrt{3}}{f^2} = 10 \sqrt{3}$$

(الف)

۴

$$CB = \frac{14}{\sqrt{3}} \Rightarrow P = \frac{14}{\sqrt{3}} + 13$$

(ب)

$$\frac{10}{\sin A} = \frac{10\sqrt{2}}{\sin B} \Rightarrow 30 = \frac{10\sqrt{2}}{\sin B} \Rightarrow \hat{B} = \frac{\pi}{f}$$

$\hat{C} = \frac{\sqrt{2}\pi}{11}$

۵

$$\frac{\tan x (\pi - x) + r \tan(a + \pi)}{r \tan(\pi - a) - \tan(r\pi + x)} = \frac{r \tan x}{-r \tan x} = -1$$

6

$$\frac{r \tan\left(\frac{\pi}{r} - a\right) + \tan\left(\frac{\pi}{r} + a\right)}{r \tan(\pi - a) - \tan\left(\frac{r}{r}\pi - a\right)} = \frac{r \cdot \tan a}{-\tan a - \cot a} = \frac{1}{-\tan^2 a - 1}$$

7

$$\frac{\sin^r + \cos^r + r \cos \sin + \sin^r + \cos^r - r \cos \sin x}{\sin^r - \cos^r} = > r = \frac{r}{1 - \cos^2 x}$$

8

$$\cos^r = \frac{1}{4} \Rightarrow \sin^r = \frac{3}{4} \quad \tan = \frac{\frac{3}{4}}{\frac{1}{4}} = 3$$

$$\frac{\sin^r - r \cos^r + \sin^r + \cos^r}{\sin^r + r \cos^r - r \sin - \cos^r} = \frac{r \sin^r - \cos^r}{\cos^r} = r$$

$$\cos^r = r \sin^r \Rightarrow \tan^r x = \frac{1}{r}$$

9

$$\cos^r(r\pi, a) = \frac{1 + \cos^r a}{r} = r\pi, a = \frac{\sqrt{r+1}}{r}$$

$$\Rightarrow \sin^r(4\pi, a) = \frac{1 - \cos^r a}{r} = 4\pi, a = \frac{\sqrt{r+1}}{r}$$

10
