$$f(u) = \sqrt{(\mu_n + u)^2} - \sqrt{(u - r)^2} = |\mu_n + u| - |u - r|$$

$$\begin{aligned} -\mu_n - u - (r - u) &= \left| \mu_n + u - (r - u) \right| = \left| \mu_n + u - u + r \right| = \mu_n + r \\ \mu_n - r &= \mu_n + r \end{aligned}$$

تابع در این صورت به صورت  
است که در این حالت  
به صورت  $\mu_n + r$  است

در اینجا  $n = 0$  و  $n \in D_f = [-\infty, 0]$  و  $u \in f(0) = 0$   
 این باز است پس  
 در اینجا مقدر است
