

$$-\frac{b}{2a} = x_s \Rightarrow$$

$$\frac{-\Delta}{2a} = y_s = v \Rightarrow \frac{-(b^2 + 12)}{-2} = v \Rightarrow \frac{b^2 + 12}{2} = v \Rightarrow b^2 + 12 = 21 \Rightarrow b^2 = 9 \begin{cases} b = 3 \\ b = -3 \end{cases}$$

۱

ریشه ندارد $\Rightarrow t^2 + 3t + 3 = 0 \Rightarrow \Delta = 9 - 12 < 0$

ب) $2 - x^2 = t \Rightarrow t^2 - 2t - 1 = 0 \Rightarrow (t-0)(t+3) = 0 \Rightarrow \begin{cases} t = -3 \text{ (قبول نمی شود)} \\ t = 0 \end{cases}$

جواب: $x^2 = 0 \Rightarrow \boxed{x = \pm \sqrt{0}}$

۲

$$\begin{cases} \beta = \alpha + 2 \\ \alpha = \alpha \end{cases} \Rightarrow \begin{cases} 5 = \frac{14}{2} = \varepsilon = \alpha + \beta \\ p = \frac{m}{\varepsilon} = 3 \end{cases} \Rightarrow \begin{cases} 2\alpha + 2 = \varepsilon \\ m = 12 \end{cases} \Rightarrow \begin{cases} \alpha = 1 \\ \beta = 3 \end{cases}$$

۳

$$5 = \alpha + \beta = \frac{4}{3} = 2 \Rightarrow \beta = 2 - \alpha \Rightarrow 2\alpha - (2 - \alpha) = \varepsilon \Rightarrow 3\alpha = 4 \Rightarrow \begin{cases} \alpha = 2 \\ \beta = 0 \end{cases}$$

$$p = 3(m-1) = 0 \Rightarrow \boxed{m = 1}$$

۴

دو ریشه مقادیر می خواهیم

$\begin{cases} m = -2 \rightarrow \Delta = 0 \text{ (قبول نمی شود)} \\ m = 1 \Rightarrow \Delta = 12 \sqrt{\Delta > 0} \end{cases}$

جواب: $\boxed{m = 1}$

$\frac{c}{a} = \frac{1}{1} \Rightarrow \frac{m^2 - 2}{-m} = 1 \Rightarrow m^2 + m - 2 = 0 \Rightarrow (m+2)(m-1) = 0$

۵

$$P = \alpha\beta = 3 \Rightarrow \beta = \frac{3}{\alpha} \Rightarrow \alpha \times \frac{9}{\alpha^2} = 2 \Rightarrow \alpha = \frac{9}{2}, \beta = \frac{3}{\frac{9}{2}}$$

$$S = \frac{12}{2} = 3 = m \Rightarrow \boxed{m=3}$$

6

$$\alpha = 3\beta \Rightarrow S = 2 = 3 + 3\beta \Rightarrow \boxed{\beta=1} \quad \boxed{\alpha=3}$$

$$P = m = 1 \times 3 \rightarrow \boxed{m=3}$$

7

$$P = +2 = \alpha\beta \Rightarrow \alpha = \frac{2}{\beta} \quad , \quad \alpha^2 + \frac{1}{\alpha^2} = \frac{1}{\beta^2} + \frac{1}{\alpha^2} = \frac{1(\alpha^2 + \beta^2)}{(\alpha\beta)^2} \Rightarrow$$

$$\frac{1(S^2 - 3SP)}{P^2} \Rightarrow \frac{1(3 \times 2^2 - 2 \times 2)}{1} \Rightarrow \boxed{301} \quad \text{جواب}$$

8

$$1) y_s = \text{ارتفاع کانه عم} \Rightarrow \frac{-\Delta}{\Sigma a} = \frac{-(2000 - 2(0))}{-20} = \boxed{92, 00m}$$

$$2) \frac{d}{dt} \text{ دوین رله} = \text{جریان} \Rightarrow -10t^2 + 0t = 0 \Rightarrow \cancel{0t} \rightarrow t(\omega - t) = 0$$

$$\boxed{t=\omega} = \text{جواب}$$

9

الف)

معادله دو جواب دارد
چون دو تابع در برخورد
در $\boxed{x=0}$ و $\boxed{x=2}$ دارند

$$x^2 - 2x + 1 = 2x + 1$$

$$x(x-2) = 0$$

$$x=0 \rightarrow x=2$$

ب)

دو جواب دارد

$$\boxed{x=-2} \quad \boxed{x=1}$$
