

$$y = -x^2 + bx + 3$$

$$-\frac{\Delta}{4a} = v \Rightarrow \frac{18a}{-18} = -b^2 + \frac{4ac}{-18} \Rightarrow b^2 = 14 \Rightarrow b = \pm \sqrt{14}$$

۵

الف) $f(x) = x^2 + 2x^2 + 3 = 3x^2 + 3$
 $\Delta = 4 - 12 \Rightarrow \Delta < 0$ (دو جواب حقیقی ندارد)

ب) $f(x) = (x - x^2)^2 - 2(x - x^2) - 15$
 ۱) $14 - 18x^2 + x^4 - 1 + 2x^2 - 15 = x^4 - 4x^2 - 2 = (x^2 - 2)(x^2 + 2) = 0$

۲) $(x - x^2) = t \Rightarrow t^2 - 2t - 15 = 0 \Rightarrow (t - 5)(t + 3) = 0$
 $\Rightarrow t = -3, 5$
 $\begin{cases} x - x^2 = -3 \Rightarrow x^2 = 3 \Rightarrow x = \pm\sqrt{3} \\ x - x^2 = 5 \Rightarrow x^2 = -1 \text{ (خارج از حیطه)} \end{cases}$

۵

$2x^2 - 14x + m = 0 \quad S = 7 \quad P = \frac{m}{2} \quad x_1 + x_2 = 7 \quad P \text{ جواب معادله}$

$\Delta > 0 \Rightarrow b^2 - 4am = 196 - 4m > 0 \Rightarrow 4m < 196 \Rightarrow m < 49$

$x_1 + x_2 = 7 \Rightarrow x_1 + x_1 + 7 = 7 \Rightarrow 2x_1 = 0 \Rightarrow x_1 = 0 \quad x_2 = 7 - x_1 = 7$

$P = x_1 x_2 = 0 = \frac{m}{2} \Rightarrow m = 0$

۵

$2\alpha - \beta = 7 \quad 3x^2 - 4x + m - 1 = 0$

$2\alpha = \beta + 7 \quad S = \alpha + \beta = -\frac{b}{a} = 2$
 $\Rightarrow \alpha = \frac{\beta + 7}{2} \quad P = \frac{c}{a} = \frac{m-1}{3} = 0 \Rightarrow m = 1$
 $\Rightarrow \frac{\beta + 7}{2} + \beta = 2 \quad \alpha\beta = 0$

۱، ۵

$\Rightarrow \beta + 7 + 2\beta = 2 \Rightarrow 3\beta = -5 \Rightarrow \beta = -\frac{5}{3}, \alpha = 2$
 $3x^2 - 4x = 0 \Rightarrow \Delta > 0$

$-mx^2 + 2x + m^2 - 2 = 0 \quad (مجموعه جوابات) \Rightarrow a = c$

$-m = m^2 - 2 \Rightarrow m^2 + m - 2 = 0 \Rightarrow (m + 2)(m - 1) = 0 \Rightarrow m = \begin{cases} 1 \rightarrow \Delta > 0 \checkmark \\ -2 \rightarrow \Delta = 0 \times \end{cases}$

۱، ۲، ۵

$\Delta = b^2 - 4ac = 4 \Delta = 14 - 4m > 0 \Rightarrow 4m < 14 \Rightarrow m < \frac{7}{2}$
 $\Rightarrow \Delta > 0$

در آن قابل قبول است.
