

(۱)

$$y_3 = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} = \frac{-12 \pm \sqrt{144 - 4 \cdot 1 \cdot 1}}{2 \cdot 1} = V \Rightarrow \frac{12 \pm \sqrt{143}}{2} < V \Rightarrow b^2 < 4 \Rightarrow b < \pm 2$$

(۲)

اگر جواب ندارد $\Delta < 0$ $\Rightarrow t^2 + 2t + 1 < 0 \Rightarrow (t+1)^2 < 0$ $\Rightarrow t = -1$ $\Rightarrow x = 1$

$$\therefore (x-1) < 0 \Rightarrow x < 1 \Rightarrow (t-0)(t+1) < 0 \Rightarrow t < 0 \Rightarrow x < 1$$

$$\sqrt{t^2 - 3t} \Rightarrow t^2 - 3t \geq 0 \Rightarrow t(t-3) \geq 0 \Rightarrow t \leq 0 \text{ or } t \geq 3$$

(۳)

$$\left. \begin{array}{l} s = t \Rightarrow a \geq \beta \\ \beta \leq d \leq r \end{array} \right\} \Rightarrow \left. \begin{array}{l} a \geq 1 \\ d \leq 1, \beta \leq 3 \end{array} \right\}$$

$$\rho \leq \frac{m}{\varepsilon} = 12 \Rightarrow m \leq 12$$

(۴)

$$s \leq \rho \Rightarrow \left\{ \begin{array}{l} a \geq \beta \leq r \\ a - \beta \leq \varepsilon \\ \beta \leq 0, d \leq r \end{array} \right. = \frac{m-1}{3} \leq 1 \Rightarrow m \leq 4$$

(۵)

$$\frac{m^2 - r}{-m} \leq 1 \Rightarrow m^2 + m - r \leq 0 \Rightarrow m \leq 1 \text{ or } m \leq -2$$

(۶)

چون m و r مثبت و $m > r$ $\Rightarrow m \leq 1$ $\Rightarrow m = 1$

(۷)

$$\begin{aligned} d \leq \frac{\varepsilon}{\beta} &\Rightarrow \frac{\varepsilon}{\beta} \leq 3 \Rightarrow \beta \leq \frac{\varepsilon}{3} \Rightarrow d \leq \frac{q}{\varepsilon} \\ a \leq \beta &\Rightarrow \frac{\varepsilon}{3} \leq a \Rightarrow \frac{\varepsilon}{3} \leq a \leq \frac{q}{\varepsilon} \Rightarrow \frac{\varepsilon^2}{3} \leq q \end{aligned}$$

$$\alpha < \beta$$

$$(\beta < \gamma \Rightarrow \beta < 1, \alpha < \gamma)$$

$$s < t$$

$$p = (m < \alpha) \quad (m < \beta)$$

$$\alpha \beta < \gamma \quad \beta < \frac{\gamma}{\alpha} \Leftrightarrow \beta \leq \frac{\Delta}{\alpha}$$

$$\alpha^2 + \frac{\Delta}{\alpha} \leq \alpha^2 \beta \leq \alpha^2 \gamma \leq \alpha^2 \beta \leq \alpha^2 \gamma \leq \alpha^2 \beta \leq \alpha^2 \gamma$$

$$-1 + (1 - \alpha) \Rightarrow \begin{cases} t < 1 \Rightarrow \text{خطی است} \\ t < 1 \Rightarrow \text{خطی است} \end{cases}$$

$$y_s = \frac{-e}{2a} = \frac{-20}{-2} = 10$$

$$f(x) = x^2 - 2x + 1 = (x-1)^2$$

$$x_1 - p \leq x_2 - p \Leftrightarrow x_1 \leq x_2$$

$$x_1 \leq -p \Leftrightarrow x_1 + p \leq 0 \Leftrightarrow x_1 \leq -p$$

$$\Rightarrow x_1 \leq -p$$
